RetailzPOS “No Matter Where You Are” — AI Video Ad Prompt Package

Drawbridge-thruster concept · Start/End image + video-motion prompts · October 2026

0. Concept recap

Inspiration: the Tesla rocket-powered supercar flip-jump-and-landing stunt, reimagined for RetailzPOS.

The spot: a RetailzPOS-branded delivery van reaches a drawbridge mid-rise, launches off the broken span, fires thrusters mid-air to correct its trajectory, lands safely on the far side, and drives on without missing a beat.

Tagline / VO close: “No matter where you are, our team makes sure you get your POS on time.”

Why it works: the stunt is the metaphor — an obstacle appears without warning, the team adapts in real time, and the delivery still lands exactly where it’s supposed to.

This is a tool-agnostic prompt package: the image prompts work in Midjourney, Flux, or DALL·E; the video-motion prompts work in any start/end-frame interpolation model (Runway Gen-3, Luma Dream Machine, Kling, Pika).

---

1. Style Lock

Append this block to the end of **every** image-generation prompt below, verbatim, to keep the van, bridge, and lighting consistent across independently generated images:

> **Style Lock:** RetailzPOS-branded commercial delivery van: sleek modern electric cargo van, clean matte white body, gold (#D6A429) accent stripe along the lower body, RetailzPOS wordmark on the side doors, dark charcoal (#221F1A) wheels and trim. Steel truss bascule drawbridge over a harbor, city skyline in the background, golden-hour lighting, warm highlights with deep teal-charcoal

> shadows, anamorphic lens flare, photorealistic, high-budget automotive commercial cinematography, shot on ARRI Alexa, 35mm lens, shallow depth of field. 9:16 vertical.

---

2. Shot-by-shot prompts

Shot 1 — Setup

The van is en route, normal delivery run, everything calm. Establishes stakes before the obstacle appears.

Start Image prompt: RetailzPOS delivery van driving along a coastal access road approaching a harbor drawbridge, low golden-hour sun behind it, motion blur on the wheels, driver visible through the windshield, calm and in control, wide low-angle tracking shot. **Style Lock** (see Section 1).

End Image prompt: Same RetailzPOS delivery van now much closer to the drawbridge, warning lights on the bridge control tower just beginning to flash red, bridge gate arm starting to lower in the background, van still at full speed, driver’s expression shifting to alert. **Style Lock** (see Section 1).

Video-generation motion prompt: Van accelerates smoothly toward camera along the coastal road, camera does a fast low tracking push following the van’s side, wheels kick up light spray/dust, warning lights on the distant bridge tower begin flashing red in the final second, building tension without the van slowing down. Realistic vehicle physics, consistent lighting, 4-second clip.

Shot 2 — The Obstacle

The drawbridge is already rising. No way to stop in time.

Start Image prompt: RetailzPOS delivery van just reaching the foot of the harbor drawbridge, the bascule span already visibly lifting open ahead of it at roughly a 20-degree angle, gap of open water beginning to show beneath the rising deck, driver’s point of view suggested through windshield reflection of the open bridge. **Style Lock** (see Section 1).

End Image prompt: Same van now at the very edge of the broken roadway, front wheels just reaching the lip where the pavement ends, drawbridge span risen further to

roughly 35 degrees, open harbor water visible below, van compressed on its suspension as if about to launch. **Style Lock** (see Section 1).

Video-generation motion prompt: Camera holds a dramatic low side angle as the van closes the remaining distance to the rising bridge at full speed, suspension dips hard as the driver doesn't brake, dust/spray kicks up from the rear tires in the final frame as the van hits the ramp-like edge of the broken span. Tense, propulsive camera energy, no cuts, 3-second clip.

Shot 3 — Launch

The van leaves the ramp and goes airborne.

Start Image prompt: RetailzPOS delivery van launching off the broken edge of the drawbridge, front wheels just leaving the pavement, rear wheels still in contact, harbor water and the far bridge tower visible below and ahead, dramatic low-angle hero shot, sense of explosive forward momentum. **Style Lock** (see Section 1).

End Image prompt: Same van now fully airborne above the harbor gap, all four wheels off the ground, van tilted slightly nose-up, water and city skyline visible far below, dust and debris trailing behind it in the air, wide shot showing the full scale of the jump. **Style Lock** (see Section 1).

Video-generation motion prompt: Camera whip-pans from a low ground-level angle up into a wide tracking shot that follows the van as it launches off the ramp and arcs into the air, slight slow-motion ramp on the moment of launch, debris and water spray trailing off the wheels, dramatic sense of scale against the harbor and skyline below. Cinematic slow-motion blend into real-time, 4-second clip.

Shot 4 — The Wobble

Mid-air, the van starts to tip — the moment of doubt before the save.

Start Image prompt: RetailzPOS delivery van mid-air over the harbor, nose beginning to dip downward, van rotating slightly off-axis as if losing its balanced trajectory, city skyline and water visible in the background, tight three-quarter angle emphasizing the instability. **Style Lock** (see Section 1).

End Image prompt: Same van mid-air, now visibly off-balance with the nose dipped further and a noticeable roll to one side, small thruster nozzles beginning to glow faintly along the van's underbody and rear bumper, first hint of correction about to begin. **Style Lock** (see Section 1).

Video-generation motion prompt: Slow-motion close-tracking shot as the van's trajectory destabilizes mid-air, nose dropping and body rolling slightly, camera drifts with the van to sell the weightlessness, subtle orange glow beginning to flicker at hidden thruster vents along the underside in the final frame. Tense, suspended-in-air pacing, 3-second clip.

Shot 5 — Thrusters Fire

The save. Thrusters ignite and correct the van's attitude mid-air.

Start Image prompt: RetailzPOS delivery van mid-air with bright blue-white thruster flames firing from concealed nozzles along its underbody and rear bumper, flames correcting the van's tilted attitude back toward level, bright light flaring against the van's white body and the gold accent stripe, dramatic low-angle hero shot. **Style Lock** (see Section 1).

End Image prompt: Same van now leveled out mid-air, thrusters still burning but easing off, nose pointed confidently toward the far side of the bridge, harbor and far roadway visible dead ahead, composition framed to lead the eye toward the landing point. **Style Lock** (see Section 1).

Video-generation motion prompt: Dynamic low-angle shot as concealed thrusters ignite in a burst of blue-white flame, visibly correcting the van's tilt back to level in real time, lens flare and heat shimmer around the flame, camera subtly pushes in to emphasize the power of the correction, van's trajectory smoothly straightens toward the far roadway. High-energy, bright practical-effect lighting, 4-second clip.

Shot 6 — The Landing

Wheels touch down safely on the far side.

Start Image prompt: RetailzPOS delivery van descending toward the far roadway beyond the drawbridge, wheels just inches from touchdown, thruster flames fully extinguished, suspension compressed in anticipation, dust already kicking up where the tires are about to meet the pavement, low dramatic angle. **Style Lock** (see Section 1).

End Image prompt: Same van now fully landed on the far roadway, all four wheels planted, suspension settling, a controlled cloud of dust and tire smoke around the wheels, van perfectly upright and centered in its lane, driver visible through the windshield looking calm and focused. **Style Lock** (see Section 1).

Video-generation motion prompt: Camera holds a low, wide, static-feeling angle as the van completes its descent and lands hard but controlled on the far roadway, suspension compresses and rebounds smoothly, tires bark against the pavement with a burst of dust and smoke, van immediately settles into a straight, confident line of travel. Satisfying, grounded, high-impact landing, 3-second clip.

Shot 7 — The Payoff Detail

A small, charming beat that confirms nothing onboard was disturbed — the human punchline.

Start Image prompt: Close-up interior/dashboard shot inside the RetailzPOS van just after landing, a RetailzPOS POS terminal box sitting securely on the passenger seat with a to-go coffee cup balanced on top of it, both completely undisturbed, warm interior light, shallow depth of field. **Style Lock** (see Section 1).

End Image prompt: Same close-up, coffee cup still perfectly balanced on the terminal box with not a drop spilled, driver’s hand reaching into frame to pick the cup up and take a casual sip, calm, unbothered body language. **Style Lock** (see Section 1).

Video-generation motion prompt: Static close-up shot inside the van immediately after the landing settles, holding on the terminal box and the undisturbed coffee cup balanced on top, driver’s hand enters frame, picks up the cup, and takes a relaxed sip — selling that the delivery, and the coffee, survived the jump without a problem. Calm, understated comic timing, 3-second clip.

Shot 8 — End Card

AI video models render on-screen text unreliably, so this shot uses a clean background plate only. Add the RetailzPOS logo and tagline as a text overlay in post-production editing, not in the AI generation step.

Background plate prompt (image or video): Soft, out-of-focus golden-hour bokeh of the van driving away down the coastal road, warm gold and charcoal tones, clean open negative space in the center-left of frame for text overlay, photorealistic, cinematic, shallow depth of field. **Style Lock** (see Section 1).

Post-production text overlay (added in editing, not AI-generated): RetailzPOS logo, followed by the line: “No matter where you are, our team makes sure you get your POS on time.”

---

3. Usage notes

- These prompts are tool-agnostic: use any image model (Midjourney, Flux, DALL·E) for the Start/End frames, and any start/end-frame interpolation video model (Runway Gen-3, Luma Dream Machine, Kling, Pika) for the motion clips.
- Generate every Start/End image pair with the Style Lock block attached so the van, bridge, and lighting stay visually consistent across all 7 shots, since there’s no native memory between independently generated images.
- Expect to run several seed variations per shot and hand-pick the best match to the previous shot’s End Image before moving on — continuity across shots is the hardest part of this workflow, not any single image.
- Do not attempt to generate on-screen text, logos, or the tagline directly in an AI image or video model — add those in post-production editing using the background-plate approach in Shot 8.
- Suggested cut order: Shots 1→7 in sequence, Shot 8 as the closing card, total runtime roughly 20–25 seconds before any extended cold open or extra breathing room is added in the edit.
