

THE STORE THAT KNOWS YOUR NAME, PROVEN AT CHECKOUT.

Moolah Points is the loyalty layer for independent, often regulated retail — liquor stores, smoke shops, and convenience counters where every transaction is fast and every regular is worth remembering. No card to carry, no app to download. A phone number becomes the relationship.

SMS & EMAIL

COMPLIANT BY DESIGN

BUILT FOR REGULATED RETAIL

Every choice below — palette, type, imagery — exists to make one thing feel true: this brand is run by people who understand a corner store, not a boardroom. Warm, quick, plainspoken. A little cheeky, because "Moolah" earns it.

SOUNDS LIKE MOOLAH

- "Free loyalty isn't free — it's just unbuilt for your store."
- "No app. No card. Just show up."
- "Your regulars already know what they want. Now you do too."

DOESN'T SOUND LIKE MOOLAH

- "Leverage our omnichannel engagement suite to drive KPIs."
- "Unlock synergistic customer lifetime value."
- Anything that reads like it was written for a boardroom, not a counter.

COLOR SYSTEM

6 TOKENS

Built from the palette already live in Moolah's own creative (Ledger Cream, Moolah Gold, Ink Charcoal), extended with a color-theory-grounded complement and two supporting accents. Gold's hue sits near 42° on the wheel; its near-complement lands in teal (~178°) rather than true-complement blue (~222°) — a softer, more sophisticated pairing that also happens to be exactly the gold-teal glow already used in Moolah's "reward moment" photography, and matches WGSN's 2026 fintech card-design forecast (Amber Haze paired with Transformative Teal).

Ledger Cream

#F6EEDC · Primary ground

The receipt paper. Warm, not sterile — every post starts here.

Ink Charcoal

#221F1A · Primary text

Warm-biased near-black, never pure #000 — softer on cream.

Moolah Gold

#D6A429 · Primary accent

The coin. Currency, achievement, reward — used as accent, never as body text.

Token Teal

#14625F · Complementary accent

Gold's foil. Reserve for the glowing "reward moment" motif and secondary CTAs.

Cellar Burgundy

#7A2436 · Vertical accent

Wine-dark, for liquor-vertical content. One accent per post — never paired with Teal.

Warm Slate

#8C8272 · Secondary neutral

Rules, borders, captions. Biased warm — never a cool, unconsidered gray.

CREAM 60%

CHARCOAL 27%

GOLD 8%

5%

A working 60/27/8/5 ratio per post — ground, ink, one bold accent, one sparing accent. If gold and teal are fighting for attention in the same layout, drop one.

Gold (42°) and Teal (178°) sit as a warm/cool near-complementary pair — close enough to true complements (222°) to create real contrast, far enough to stay premium rather than loud. This is the only high-contrast accent pairing sanctioned for hero moments; Burgundy is a single-accent alternate, not a third player in the same pairing.

TYPOGRAPHY

Three typefaces, three jobs. Never substitute a "safe" grotesk for the display face — the condensed weight is doing half the brand's personality on its own.

DISPLAY

Anton

Headlines, section titles, hero statements. All caps only.

YOUR REGULARS DESERVE MORE THAN A RECEIPT.

BODY

Nunito

Subheadlines, captions, UI copy, long-form text.

Welcome points, birthday bonuses, referral perks — running automatically, without anyone behind the counter lifting a finger.

Regular 400 SemiBold 600 **Bold 700** **ExtraBold 800** **Black 900**

UTILITY

Space Mono

Hex codes, data, tags, item numbers — the "receipt printer" voice.

72% MORE LIKELY TO JOIN VIA TEXT — SUBTOTAL: 1 REGULAR EARNED

#D6A429

#14625F

§ 03 TYPE

ISSUE No. 001

LOGO & MARK

3 COLORWAYS

Three overlapping "D" forms — read as coins stacked in profile, or three quotation marks (the brand talking back to its merchants). Never fewer than three, never restacked.

GOLD ON CREAM — default

CHARCOAL ON LIGHT — print, low-contrast surfaces

CREAM ON INK — dark posts, video covers

Clearspace: leave a gap equal to one "D" width on every side — nothing else touches the mark. Minimum display size: 24px tall in digital, 0.4in in print.

✗ Don't recolor off-palette

✗ Don't stretch or skew

✗ Don't drop to two marks

IMAGERY & MOOD

REFERENCE BOARD

The signature device is a "reward moment" — a merchant and a regular, mid-exchange, with a glowing token overhead. Every photo reference should feel like this board: warm practical light, jewel-tone glow, a little theatrical.

POST TEMPLATE

2 EXAMPLES

The recurring structure: URL badge, mark, Anton headline, two-tone Nunito subhead, gold CTA, arch-topped photo panel. Below, the same skeleton applied to two verticals — swap headline, subhead, and photo only.

Photo panel prompt (liquor): warm photoreal scene, liquor shop shelves softly blurred, shopkeeper handing a ribboned gift box to a delighted customer, glowing gold-teal holographic token hovering above the exchange, arch-topped crop, pendant lighting. **Photo panel prompt (convenience):** same device, bright convenience-store counter, cashier handing over a ribbon-tied coffee cup, commuter customer reaching for it mid-rush, morning light.

DO / DON'T

DO

- Keep one bold accent per post — Gold, Teal, or Burgundy, never two at full strength together.
- Set headlines in Anton, all caps, tight leading.
- Let Ledger Cream carry the majority of every layout — it's the ground, not a highlight.
- Use Space Mono only for data, tags, and small print — never for headlines or long body copy.

DON'T

- Don't set body copy in Moolah Gold on Cream — contrast fails accessibility checks.
- Don't pair Teal and Burgundy as co-equal accents in one asset.
- Don't swap Anton for a generic grotesk "just this once."
- Don't recolor, stretch, rotate, or drop the mark to fewer than three forms.
